Errata

All the doses reported in this paper were correct, but Figure 4, which relates the mean heart dose to the mean LAD (left anterior descending) coronary artery dose in patients who received left-tangential radiation therapy, was incorrect. The figure below replaces it. The main message of the figure is unchanged and is that, for women who received left-tangential irradiation, high LAD coronary artery dose tended to be associated with high mean heart dose. In addition, the finding that the patient with the highest mean heart dose also had the highest mean LAD coronary artery dose is unchanged.

The title of this article contained an error in terminology. The corrected title should read “Dosimetric impact of breathing motion in lung stereotactic body radiation treatment using intensity modulated radiotherapy and volumetric modulated arc therapy.”

“John Fitzpatrick” was incorrectly listed as the author of the Oncology Scan in the Issue Highlights. The correct author is John P. Kirkpatrick. The Red Journal regrets any inconvenience or confusion this may have caused.

The number of retracted papers between 2001 and 2010 was incorrectly described as a 19-fold increase. The true increase in retracted papers is 10-fold (1). The Red Journal would like to thank Ivan Oransky, of Retraction Watch, for pointing out this error.
